Shifts in End Uses of Mineral Commodities Owing to Changing Technologies were used in such items as compact disks and digital videodisk Gallium players, and GaAs-based ICs are used in sophisticated military radars ( Kramer, 2004 ). New technologies allow for new uses for gallium owing Gallium consumption rose 168 percent from 1975 to to its properties of conductivity, transparency, and resistance 2003. Most noticeable was the growth in the overall amount to high temperatures. Gallium also easily alloys with most of gallium used in the production of IC which grew from metals. Analog integrated circuits ( IC ) are the most common 3. 15 t in 1988 to 8. 14 t in 2003, reaching a peak 2000 of 26 t application for gallium, with optoelectronic devices ( mostly or nearly 66 percent of total gallium use. Consumption of laser diodes, light-emitting diodes LEDs , photodetectors, gallium in optoelectronic devices reached a peak in 1995 of and solar cells ) as the second largest end use. Gallium has nearly 88 percent of total gallium use ( 14. 80 t ). In 2000, the semiconductor properties, especially as gallium arsenide apparent consumption of gallium, most of which was imported ( GaAs ), which can convert electricity to light for use in LEDs in raw mineral form from China, Japan, and Ukraine, reached for electronic displays. Increasing sales of electrical and a peak of nearly 40 t. The precipitous drop in gallium use after electronic products have increased the use of gallium. ICs are 2000...
