# THE MESSENGER OF MATHEMATICS VOLUME 25-26

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1896 Excerpt: .each operation Ar(rn--1) can be expressed in terms of the above n operations of order 2. Those of the operations-TMi-d Ai-i-u therefore, which are distinct form an Abelian group of order 2, where n may be equal to, but cannot exceed n. This group is transformed into itself by the operation S, and therefore by an elementary theorem in group-theory, the order of the group generated by S and A is either 2n or 2n i. (Suppose now that A and S are any two operations of order 2 and 2 --1 respectively of a doubly-transitive group of degree 2 and order 2 (2 --1). Then all the operations of the group of order 2 are included in the form SASr, and they are all permutable with each other. Hence, A and S must satisfy a relation of the form A.S- AS=S- AS Now by the above theorem, A and S, when connected by this relation, generate a group of order 2 (2 1--1), where - does not exceed n. If ri is greater than -i, the group would contain more than 2m--1 operations of order 2, which is impossible, since all the operations of order 2 are permutable among themselves. On the other hand ri cannot be less than m, since the relation in question is a necessary one in order that A and S should generate the doubly-transitive group. Hence ri must be equal to m, and the group is completely defined by the...
